## Analytics-Driven Parcel Spend Insights

Analyzing shipping and fulfillment data gives you critical insight into your operations, highlighting processes where improvements will reduce cost and increase revenue. Elevate's Parcel Spend Analytics, powered by EasyPost, gives you the power to drive that change by continuously evaluating profitability from live data sources.

## Parcel Spend Analytics

# Parcel Cost Exceptions

Review spend by charge type exception categories from fuel surcharges to address corrections and more so you can follow up as necessary.

# Cost Performance by Destination

Use heat mapping to highlight cost differentials by package destination in order to identify and mitigate issues in the supply chain network.

# Weight & Zone Breakdowns

Compare costs to the distribution of package weight and zones across time to understand how those factors affect profitability and identify cost-saving measures.

# Cost Trending by Service

View cost trends over time by service as compared to forecast or historic values to watch for patterns that will aid in better predictive capabilities.

# Dimensional Factor Evaluations

See which packages are hitting carrier dimensional factors resulting in upcharges so you can right-size your packaging, use bags when it makes sense, and make other small adjustments.

# Package Level Insight

Drill into all shipments and see the underlying details down to the package level to review the shipment's chain of custody along with time stamps and explore exactly what occurred.
